

AUG 10 2007Application Serial No. 10/674,013
Amendment and Response to May 11, 2007 Non-Final Office Action**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method, comprising:
configuring a first device as an associated device ~~in~~ with a system, wherein said first device is associated and not registered with said system;
receiving availability information regarding a second device from a device management component of said system, said second device being registered with said system;
maintaining availability information regarding said first device and said second device; and
providing device context information for said first device to an application.
- 2.(Original) The method of claim 1, wherein said configuring a first device as an associated device in a system includes receiving a call from an application to configure said first device as an associated device.
3. (Original) The method of claim 1, wherein said receiving information regarding a second device from a device management component includes receiving device context information regarding said second device from said device management component.
4. (Original) The method of claim 1, wherein maintaining information regarding said first device and said second device includes maintaining device context information for said first device and device context information for said second device.
5. (Original) The method of claim 1, further comprising:
receiving a call from an application to configure said first device.

Application Serial No. 10/674,013
Amendment and Response to May 11, 2007 Non-Final Office Action

6. (Original) The method of claim 1, further comprising:
receiving a call from an application to set a device context for said first device.

7. (Cancel)

8. (Original) The method of claim 1, further comprising:
providing device context information for said first device and said second device
to an application.

9. (Original) The method of claim 1, further comprising:
providing device context information for said first device to said device
management component.

10. (Original) The method of claim 1, further comprising:
receiving a query for device context information for said first device.

11. (Original) The method of claim 1, further comprising:
receiving a query for device context information for said first device and said
second device.

12. (Cancel)

13. (Original) The method of claim 1, wherein said device management
component includes a presence and availability service.

14. (Currently Amended) A system, comprising:
an application;
a device management component, said device management component
adapted to communicate with a first registered device;
a context management component, said context management component
adapted to:

Application Serial No. 10/674,013
Amendment and Response to May 11, 2007 Non-Final Office Action

communicate with a first associated device, with said application regarding said first associated device and said first registered device, and with said device management component regarding said first registered device, wherein said first associated device is associated and not registered with said system; and provide device context information for said first associated device to said application.

15. (Original) The system of claim 14, wherein said application is adapted to send a call to said context management component to configure said first associated device.

16. (Cancel)

17. (Original) The system of claim 14, wherein said context management component is adapted to send device presence information for said first associated device to said device management component.

18. (Original) The system of claim 14, wherein said device management component includes a presence and availability service.

19. (Previously Presented) The system of claim 14, wherein said system operates in a session initiation protocol (SIP) environment and said first associated device is not registered in said SIP environment and said first registered device is registered in said SIP environment.

20. (Original) The system of claim 14, wherein said device management component does not see said first associated device.

Application Serial No. 10/674,013
Amendment and Response to May 11, 2007 Non-Final Office Action

21. (Previously Presented) The system of claim 14, wherein said application, said context management component and said device management component operate in a session initiation protocol (SIP) environment and said first registered device is registered in said SIP environment.

22. (Currently Amended) An article of manufacture comprising:
a computer readable medium having stored thereon instructions which, when executed by a processor, cause said processor to:
 configure a first device as an associated device in a system, wherein said first device is associated and not registered with said system;
 receive availability information regarding a second device from a device management component of said system, said second device being registered with said system;
 maintain availability information regarding said first device and said second device; and
 provide device context information for said first device to an application.

23. (Currently Amended) An apparatus, comprising:
a processor;
a communication port coupled to said processor and adapted to communicate with at least one device; and
a storage device coupled to said processor and storing instructions adapted to be executed by said processor to:
 configure a first device as an associated device in a system, wherein said first device is associated and not registered with said system;
 receive availability information regarding a second device from a device management component of said system, said second device being registered with said system;
 maintain availability information regarding said first device and said second device; and
 provide device context information for said first device to an application.
